

I'm writing to recommend RAYES BOILER. They removed a KEWANEE Boiler 100hp, 15PSIG steam pressure, 4185MBH that generates a 220d F.

RAYES BOILER installed a 60hp Boiler, 15PSIG steam pressure with 2056BMH and generates 220d F with a burner of high efficiency.

Our tanks have a temperature capacity of 200 and this boiler generates perfectly, we then decided to buy it and it works fantastic.

Chem Plate has the boiler over two (2) years now and it's a huge save, we only used half the water & gas we were using with the KEWANEE. The Boiler from RAYES

BOILER is a 60hp and it's doing double of what KEWANEE was doing for the plant and also saving us a lot of money.

Chem Plate recommends this boiler from bottom to top.

Sincerity,
