In October 2007 I contacted Rayes Boilers to find a way to increase our production demands at our facility located in Morton Grove, IL. We currently had 3 boilers running at a total of 16 Million Btu's that failed to meet all of our daily production demands. Rayes informed us they can upgrade our current boiler system with their New High Efficiency Boiler Technology that runs on much less fuel. By the end of October, Rayes had installed 2 new boilers that were running our entire plant on a total of 5 Million Btu's. I honestly cannot say how much we are saving in fuel costs, but I can definitely say we eliminated our demand problems.

After seeing great results with the 2 new boilers installed in 2007, I made Rayes Boilers our exclusive boiler company. In 2008 I made another purchase of 3 additional Rayes Boilers for a different processing application at my facility in Morton Grove. It has been over 3 years since the first set of Rayes Boilers was installed in our facility and we have had absolutely no problems.

Lifeway Foods 2007 Boiler Upgrade

Previous Boilers

New Rayes Boilers

75% less BTU's

62% less BTU's
